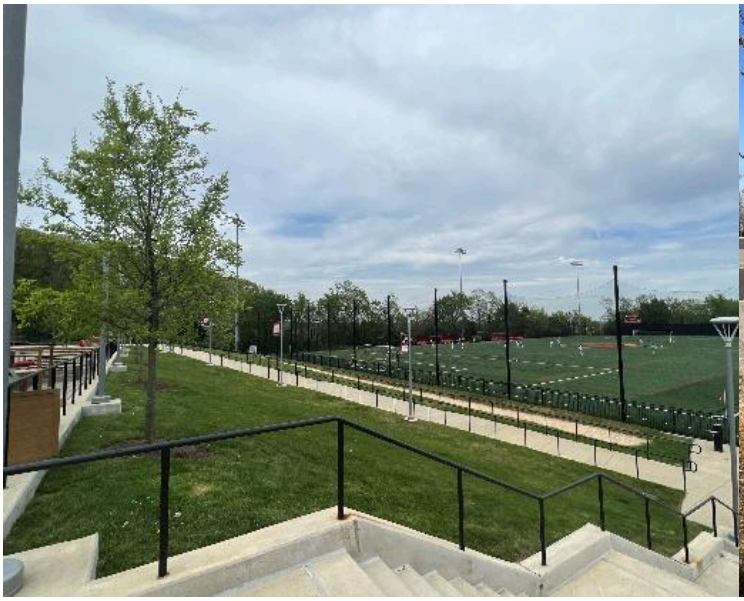
CUA Carlini Field



Greening Urban, LLC provided full civil engineering services for the new Carlini Field at the Catholic University of America (CUA) in Washington, DC. Carlini Field is a multipurpose athletic field that serves as a crucial central location for student campus life at the university. Greening Urban provided complete civil engineering services through all phases of design, permitting, and construction - including construction management - for the new parking lot, field house, and athletic field.

This work included incorporating an innovative stormwater management design that utilized a series of passive technologies, which involved designing the permeable turf field. This approach reduced infrastructure costs while meeting the District Department of Energy and the Environment's new stormwater regulations.

Greening Urban was a subcontractor for this project.

Location
3606 John McCormack Rd. NE
